

TIMBERMILL®

SIMULATED CEDAR SIDING

New Timbermill® Simulated Cedar Siding from Style Crest® offers everything you love about natural cedar...

except the sanding, staining, splintering, warping, weathering and worry. It's the high-performance, low-maintenance, affordable alternative to wood.

Perfect when used as a primary siding, or as an accent to stone, brick or other cladding. Timbermill® is available in four profiles, to replicate four popular cedar siding patterns and two stunning, no-fade colors. Recreate your favorite natural cedar look and never have to undertake the maintenance that actual wood siding demands.

- Realistic appearance achieved with knots and wood grain
- Panels available in a variety of patterns to achieve an authentically random look
- Blends well with traditional siding materials when used as an accent

Single 7 (S7) and Log Cabin panels feature a foam core, adding increased impact resistance and sound deadening.
