

Cost-effective protection with lasting durability.

Protect what's important with a beautiful, low-maintenance, long-lasting, environmentally conscious residential metal roof.

Smart over time: longevity and durability

Metal roofing's durability sets it apart from options such as asphalt shingles and cedar shake. Designed to withstand extreme weather conditions and seal out water, metal roofs resist fire, impact, rot, insects and corrosion. They can last up to four times longer than asphalt roofs—and come with a 40 year warranty on most standard colors.

Lowers costs by reflecting the sun

Coated metal roofing offers the highest SR coatings values in the industry. You could help cool your home and lower energy costs without sacrificing durability, performance or beauty. Since the material reflects the sun's heat, air conditioning expenses can drop between 10% and 20%.

Good for the earth—and your foundation

Our roofs contain recycled content and are 100% recyclable. A metal roof can be one-eighth the weight of other roofing products, placing a lighter load on the structure and foundation. Some varieties can be applied over an existing roof without additional support. And if you're building new, you can often eliminate roof support members.

valspar

Attractive colors and finishes designed to stand up to weather, sun, and time.

Brighten your home with lasting color

Valspar residential metal roof coating options come in a wide variety of colors—and are designed to hold that color over time.

WeatherXL™ provides a cutting edge formulation known for its durability in extreme conditions. This enhanced silicone-modified polyester resin system delivers maximum protection against chalking, fading and scratch resistance while maintaining the colors' lasting impression for years.

WeatherXL™ Crinkle Finish adds a rich, shimmering durable texture for a unique aesthetic appearance.

Fluorpon® family of coatings: a 70% PVDF resin system, all systems are designed to hold their color for years to come.

Earn a star by saving energy

With the use of solar reflective pigments that keep your home cooler, your metal roof could earn an EPA Energy Star rating and the Department of Energy's cool roofing designation—while meeting state and local requirements for energy-efficient roofs.

Smart at the start: financing

You may qualify for financing through the HERO program—which finances energy-efficient home improvements through PACE (Property Assessed Clean Energy). In addition, home appraisers often value energy saving and environmental add-ons.
